SHAHZER NAJEEB

SENIOR FULL-STACK SOFTWARE ENGINEER | REMOTE

Current Location: India | **Email:** m.shahzer.najeeb@gmail.com | **Github:** github.com/shahz-n
LinkedIn: linkedin.com/in/m-shahzer-najeeb | **Phone:** +91 786 053 6423 | **Website:** horizon.shahzer.dev

PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with **6+ years** of experience building production systems across **multiple domains**, including **fintech, HR-tech,** and **marketplace** platforms, and across **multiple environments** ranging from **early-stage startups to growing organizations** and **large enterprises.** Strong across the **full stack** with depth in **backend architecture**, **distributed systems**, and **performance**, alongside substantial experience building **complex frontend applications** and **real-time interfaces**. Experienced designing, developing, and owning systems **end-to-end**, from architecture through implementation and deployment.

TECHNICAL SKILLS

Programming Languages - JavaScript · TypeScript

Backend - Node.js · Express.js · NestJS · REST APIs · GraphQL · Microservices · System Design · Distributed Systems · Redis · RabbitMQ · Kafka · Real-Time Systems · WebSockets · RAG · Authentication & Authorization

Frontend - React · Next.js · Tailwind CSS · Redux · Zustand · Svelte · Three.js · WebGL · CSS · HTML

Databases - PostgreSQL · MySQL · Microsoft SQL Server · MongoDB · DynamoDB · SQL · NoSQL

Cloud & Tools - AWS (Amazon Web Services) · Google Cloud Platform · Microsoft Azure · Docker · Git · GitHub · Linux · Serverless · CI/CD · AI-Assisted Development

PROFESSIONAL EXPERIENCE

NymCard — Abu Dhabi, UAE (Remote) · **Jan 2026 – Jul 2026**
Sr. Software Development Engineer · Fintech

- Owned **end-to-end development** (backend, frontend, database) of features for **Nym4Business**, a **multi-tenant B2B platform** providing financial infrastructure to SMEs and organizations.
- Developed a **configurable approval-rule engine** supporting custom transaction conditions (amount, type, sender/recipient) with multi-approver logic across roles and individuals.
- Developed **two-factor authentication** and **audit-logging mechanisms** integrated with NymCard's core payment systems.
- Built **dashboards** and **GraphQL APIs** facilitating management and data access across role and permission hierarchies.

Moback — Bangalore, India (Remote) · **Dec 2024 – Jan 2026**
Sr. Software Development Engineer · HR-Tech

- Developed **core backend services** (NestJS) powering Korn Ferry Talent Suite, a **global HR-tech platform** serving thousands of organizations across 150+ countries.
- Designed an **internal-routing system** for inter-service communication, reducing inter-service latency by up to **70%** and overall latency by up to **40%**, with no handler code changes required.
- Built a **streaming export system** for multi-gigabyte audit-log CSVs, reconstructing data in real time to minimize server memory use and eliminate storage costs.
- Designed an **advanced request-tracing system** delivering detailed traces, including database and HTTP calls, with no added processing or network overhead in response pipelines.

BorrowBe — Edmonton, Canada (Remote) · **Jan 2023 – Dec 2024**
Founding Engineer & Technical Lead · Marketplace

- **Founding engineer** and **tech lead** for a rental marketplace platform; architected and owned most of the backend and desktop UI development, leading a team of three from initial design through production deployment.
- Designed a **hybrid geolocation and address-based search system** (map, radius, and structured address queries) alongside an extensible, **inheritance-based CMS** giving granular per-category control over listing fields, pricing packages, and limits.
- Built a **real-time chat and notification system** with per-listing conversation identity, live presence, and real-time listing updates.
- Built a **Stripe-integrated wallet and auto-renewal payment system** with a hybrid ledger (direct payments and credits) and hash-locked transaction immutability.

Independent / Freelance — New Delhi, India (Remote) · **Apr 2020 – Dec 2022**
Full-Stack Developer

- Built full-stack web applications for clients across **20+ countries**, including a gaming-focused social platform, a video conferencing app, and an interactive coding education tool.
- Provided technical mentorship to **100+ developers** across the full skill spectrum, from teaching absolute beginners to advising working professionals on system design and software development.

PROJECTS

Astrarium - Real-Time, To-Scale Solar System Orrery
Three.js · Svelte · TypeScript · WebGL · GLSL

- Built a **to-scale 3D orrery** of the solar system, including all planets, dwarf planets, and major moons, based on real astronomical data.
- Designed a **Keplerian orbital-motion engine** with true-to-scale velocity, live orbit and label tracking, motion trails, and a custom clock and time system scaling from real time to several years per second.
- Designed and published an **npm package** for **high-precision line rendering**, using custom shaders and camera-relative coordinates to eliminate GPU floating-point jitter at astronomical scales.
- Built **three custom camera systems**, including a six-axis free-flight mode, rebuilding Three.js's native orbit controls from scratch to handle extreme time-scale chase scenarios.

Context Studio - AI Knowledge & Content Workspace

Next.js · TypeScript · Supabase · Redux · Anthropic

- Designed a **fault-tolerant, idempotent document-ingestion pipeline** for a serverless environment, using database-based locking, a queue system with time-based lock expiry, parallel batch workers, and long-timeout keep-alive requests to survive instance recycling.
- Built a **hybrid retrieval system** that dynamically routes between lexical and vector search based on query length, interleaving results where both are effective.
- Built a **feedback-driven research-brief system** with adaptive topic and source weighting, carrying user feedback into generation state to continuously refine subsequent briefs delivered through cron-based generation.

CERTIFICATIONS

ITPEC Fundamental Information Technology Engineer (FE)

LANGUAGES

English — Native / Bilingual Proficiency

Japanese — Conversational (JLPT N3)
